

## Nexthaus Corporation announced today certification of its SyncJe Client Protocol Stack on the Palm OS and Pocket PC platforms.

RALEIGH, June 25, 2002 - Both popular PDA platforms can now be supported using the same 100% Java SyncML certified client for synchronization and data exchange. Developers and IT organizations can utilize Nexthaus' **SyncJe Client for Palm OS** and **SyncJe Client for Pocket PC** for synchronization of personal data resident on the devices, and custom/enterprise data from custom applications.

The SyncJe Client Protocol Stack can reside on any Java Virtual Machine supported device and facilitates synchronization, data exchange and real-time data access with SyncML compliant servers

“The portability of our protocol stack was again validated when we passed the SyncML certification testing without any changes to the client code,” said Dwain Stallings, Nexthaus' VP of Business Development. “We decided to certify the PDAs only a couple of weeks before SyncML's June ‘SyncFest’ as a demonstration of our capabilities. We spent our time understanding the Java environments [IBM's J9 was chosen] on each device and their databases [native for Palm and Outlook for Pocket PC], but we didn't need to look at the stack.”

### About Nexthaus

Nexthaus is an innovative provider of data exchange and synchronization software. SyncSuite software unites the data on PCs, PDAs, mobile phones and other remote devices, whether directly connected or wireless. Committed to proliferating SyncML in a Java environment, Nexthaus' second-generation products are nonproprietary and available in an OEM/partnering business model.

### About SyncML

SyncML ([www.syncml.org](http://www.syncml.org)) is the open industry specification for mobile data sync and device management. Sponsored by Ericsson, IBM, Lotus, Matsushita Communication Industrial Co. Ltd., Motorola, Nokia, Openwave, Starfish Software and Symbian, SyncML is supported by mobile and wireless leaders across various industry sectors worldwide. Companies interested in bringing SyncML compliant products and services to market are encouraged to join.
